

The image shows a Visual Studio Code editor with a file named `client.js` open. The code is a JavaScript client that makes an HTTP GET request to `http://localhost:3000/stream`. It uses the `http` module and `Promise` to handle the request. The response is streamed to the console using `process.stdout.write(chunk)`. The terminal output shows the command `node client.js` being executed, followed by the JSON response body: `{"message": "Hello from server", "author": "Akshat", "time": "2025-11-12T04:43:21.354Z"}`. Below this, the terminal shows the request details: `>>> Requesting /data?format=xml (XML expected)`, `Status: 200`, and the XML response body: `<response><message>Hello from server</message><author>Akshat</author><time>2025-11-12T04:43:21.358Z</time></response>`. At the bottom, a table lists 12 streams with their corresponding timestamps.

```
1
2
3 const http = require('http');
4
5 function streamFromServer() {
6   return new Promise((resolve, reject) => {
7     const req = http.get('http://localhost:3000/stream', (res) => {
8       res.setEncoding('utf8');
9       console.log('--- Connected to /stream - live lines below (will end when server closes) ---\n');
10
11       res.on('data', (chunk) => {
12         process.stdout.write(chunk);
13       });
14
15       res.on('end', () => {
16         console.log('\n--- /stream ended by server ---\n');
17       });
18     });
19   });
20 }
```

PS D:\practical 13> node client.js

Body:
{ "message": "Hello from server", "author": "Akshat", "time": "2025-11-12T04:43:21.354Z" }

>>> Requesting /data?format=xml (XML expected)
Status: 200
Body:
<response><message>Hello from server</message><author>Akshat</author><time>2025-11-12T04:43:21.358Z</time></response>

STREAM	TIME
